IT specialists

Do you have the Bayer Spirit?

Planning, realizing and operating cutting-edge IT technologies:
Network services, PC services, Server operation,
Software implementation, ERP systems, Web services,
Project management, Consulting and support

Start out with a sound basis

Environment

Information technology occupies a key position within the Bayer Group. The global nature of the company and its organization means a high-performance, highly integrated and globally standardized IT architecture is a must. Experts in more than 60 countries work to ensure that the worldwide Bayer network functions smoothly and is improved on an ongoing basis.

IT specialists therefore maintain and develop state-of-the-art IT which helps control global business processes and assists with the planning, assembly and operation of complex plants. Furthermore, research is also a key application area for IT within the company.

It follows that we need the right level of expertise across the entire Group – both in the three sub-groups and the three service companies. Even though the tasks involved differ, they do all have one thing in common: A need for employees who do not see technology as an end in itself, but who instead focus on the benefits it offers the company.

Requirements

The job opportunities open to IT specialists are determined, among other things, by the education and training received. Bayer is interested in graduates from a variety of disciplines, including IT/mathematics, physics, chemistry, engineering, economics, information systems and specialists in telecommunications and networks.

Specific responsibilities could include the installation and operation of IT infrastructures, PC services, network services for everything from single building networks to the global data network, global e-mail services and server operation. In the field of science, technology and environmental protection, the focus is on expert scientific research, library services and information systems for end users, and application development and operation. Further responsibilities range from software implementation and the provision and operation of HR systems right through to consulting and support in all areas of IT. Business-management application systems, host and web technologies, and ERP and information systems for procurement and transport management, also play a key role.

We are therefore looking for people with outstanding intellectual ability and well-founded specialist knowledge. We are also looking for an analytical mindset, strategic planning expertise, teamworking skills and an ability to see the bigger picture when problem-solving. For some positions, a doctorate may also be an advantage.

Marina Otgianu wants to make the world a better place – for everyone.

As a technical Specialist at Bayer, Marina knows she is doing just that. Searching for solutions and never giving up. That is the passion that unites all of us at Bayer. We call it the Bayer Spirit. If you feel it, too, then it is high time we had a chance to talk about a career at Bayer.

Opportunities

There are various opportunities for IT specialists to join the company, particularly in the IT sections of the subgroups and service companies, and in the technology service and research areas. There is also scope to join the subgroup sections focusing specifically on innovation.

Thereafter, there will be countless opportunities to expand your knowledge on an ongoing basis. Comprehensive training programs, different project responsibilities, scheduled job rotation and the chance to work abroad will all ensure that you are constantly developing and taking on new challenges. And the possibilities for driving forward your own career are just as impressive. Bayer will support you in a variety of ways including regular development discussions, internal Assessment Centers, job enlargement and job rotation.
